

Putting it all together

Uploading learning objects to the course site

Lesson objectives

By the time you complete this unit of study, you will be able to:

- Construct a logical series of at least 3 learning units that include voice-enhanced presentations and print outs in web-friendly format, within an LMS.
- Demonstrate good online course design skills by uploading and arranging each of the following: a course description that includes goals and objectives, a syllabus, an assessment rubric, and course assignments in web-friendly format.
- Formulate a weekly virtual communication plan and clear instructions regarding how this will occur, in a web-friendly format for inclusion within an online course site.

Previously covered

Throughout this course you have been:

- Chunking information by creating small learning units
- Designing active learning assignments that challenge students to demonstrate competency

You have learned:

- How to use the technology for online learning
- How to design instruction for online learning

Personal meaning / the large project

- We have previously covered everything you need to know to meet the lesson objectives for this study unit.
- Now is the time to apply all that you have learned and create personal meaning, by creating your very own course site.

Review and compile

- Review all the previous learning unit presentations.
- Compile all the learning objects you have created so far into your course site in a logical manner.
- Put the puzzle together!

Many small pieces make one whole

- Follow the assignments list for this unit very carefully and
- Follow your course design project plan
- Stick to your WBS
- Track your progress
